

CHANDRA PRAKASH CHAKALI

Data Analyst | Business Analyst | Power BI Developer
user.chandraprakash@gmail.com • +91-9985285633 • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Results-driven Computer Science fresher with hands-on expertise in data analytics, business intelligence, and full-stack development. Proficient in Power BI (DAX, dashboards, data modeling), SQL (complex queries, joins, optimization), and Python (pandas, NumPy, matplotlib) for transforming raw data into actionable insights. Adept at identifying patterns, automating workflows, and communicating data-driven findings to stakeholders. Eager to contribute analytical and problem-solving skills to Data Analyst, Business Analyst, or Power BI Developer roles.

TECHNICAL SKILLS

Data & BI Tools: Power BI (DAX, Data Modeling, Dashboards), Excel (Pivot Tables, VLOOKUP)

Programming: Python (pandas, NumPy, matplotlib, seaborn) | Core Java

Database & SQL: SQL (Joins, Subqueries, Window Functions, Query Optimization), MySQL, MongoDB

Tools & Platforms: Git, GitHub, VS Code, Postman, Jupyter Notebook

Core Competencies: Data Cleaning, EDA, Data Visualization, Business Reporting, KPI Analysis

PROJECTS

Sales Performance Dashboard | Power BI | DAX | Excel | 2025

- Designed an end-to-end interactive Power BI dashboard tracking 12+ KPIs including revenue, gross margin, regional sales, and YoY growth across 5 product categories.
- Developed 20+ DAX measures for dynamic calculations such as MTD/YTD revenue, rolling averages, and variance analysis; reduced manual reporting time by ~40%.
- Implemented row-level security (RLS) and drill-through pages enabling executives to explore granular data without sharing underlying datasets.
- Cleaned and modeled data from 3 Excel sources using Power Query, establishing a star-schema data model that improved report refresh speed by 30%.

Retail Customer Behavior Analysis | SQL | MySQL | Excel | 2025

- Conducted in-depth analysis on a 500,000-row retail transaction dataset using advanced SQL — joins, CTEs, window functions, and subqueries — to uncover purchasing trends and seasonal patterns.
- Identified top 10% high-value customers generating 65% of revenue using RFM segmentation queries, enabling targeted retention strategies.
- Optimized 8 slow-running queries by adding indexes and rewriting correlated subqueries as CTEs, reducing average query execution time by 50%.
- Designed and normalized a relational database schema (3NF) for an e-commerce platform with 8 interrelated tables covering customers, orders, and inventory.

Personalized Medicine Recommendation System | Python | scikit-learn | Flask | 2024

- Built a machine learning-powered web application that predicts diseases and recommends medicines, trained on clinical datasets with 92% model accuracy.
- Applied data preprocessing pipelines (normalization, feature selection, SMOTE for class imbalance) using pandas and scikit-learn to improve model performance by 18%.
- Deployed the model via a Flask API with an interactive frontend, enabling real-time disease prediction for end users.

EDUCATION

B.Tech in Computer Science Engineering | Anantha Lakshmi Institute of Technology & Sciences, Anantapur | 2022 – 2026

CGPA: 8.0 | Relevant: Data Structures, DBMS, Statistics, Machine Learning

Class XII (BIEAP) | Narayana Junior College | 2020 – 2022

Score: 89%
